

# SUSAN'S BRAINWORK

## tip 13

Hello,

I am one of four children in my family, the third child to be exact. I have a brother who is 2 years older, a sister who is 4 years older, and a sister Patty who is 7 years younger. Obviously, Patty's birth was out of sequence, so I decided her birth must have been a pleasant surprise to my parents. So, in my youth, I liked to tease Patty and created a shamefully simple chant "Patty was an accident, Patty was an accident..." You get the idea. It was complete with awkward dance moves. One day my sweet mom exasperated by my lyrical tribute exclaimed, "Susan, if you must know, you were all accidents!" From that day forward I deemed accidents to be good, at least on this particular topic.

Accidents surround us for good and for bad. And sometimes these accidents involve a computer. Either intentionally or unintentionally the desktop gets reconfigured, files and icons are deleted, apps are downloaded, inappropriate websites are visited, etc. It is quite amazing the damage that can be done with a simple click or two.

While good accidents are to be left untouched, we'd like to help you with the time consuming hassles of accidental and intentional mischief on your computers. Use the links below to sign up for one of our brief, informative webinars to see how our software can help save you time.

Until next time,

Susan
